## Personal Service Establishment Fact Sheet

A list of facts of particular interest to this industry.

### Fact:

- Bacterial, Viral and Fungicidal infections can be contracted from common tools used in the industry.
- HIV, Hepatitis B and C and other diseases can live outside the body for a few days to a week.
- Alcohol is not an effective sterilizer.
- Barbicide is neither a sterilizer nor a high level disinfectant. It is a low level disinfectant that does not kill bacterial spores and will often not kill fungi and viruses. The product must be changed if at all cloudy. (Thunder Bay District Health Unit Personal Services Reference Handbook)
- Instruments should be soaked for a minimum of ten minutes in a high level germicide after each use.
- Tables, chairs, tanning booths and any surfaces that contact the skin should be wiped down with a high level disinfectant after every use, preferably with a disposable single use applicator.

## Septefx Fact Sheet

### Fact:

- Septefx is a high level germicide effective against bacterial, fungicidal and viricidal activity.
- Septefx is effective against the viruses that cause such diseases as HIV and Hepatitis.
- Septefx is a high level product that is safe for use on all instrument classifications.
- Septefx will not harm surfaces such as leather, plastic, naugahyde, rubber, etc.
- Septefx is environmentally friendly, biodegradable and contains no known toxins.
- Septefx is the only product required to properly maintain the cleanliness of your entire establishment as it cleans and disinfects in one step.
